Where Solitude Is in Season

A picture essay by

BRUCE DALE

NATIONAL GEOGRAPHIC PHOTOGRAPHER

Text by

PAT HUTSON

DECEMBER 21 Snow is almost three feet deep and still falling. The mail boat has made one of its thrice-weekly winter visits, and most of the village's 40 year-round residents met it—including me.

I first came to Stehekin (Steh-HEEL-kin) in central Washington on New Year's Day 1971. Accessible only by boat, plane, or trail—its roads link the houses but go nowhere else—this southern gateway to North Cascades National Park was a snowbound oasis in a hectic world. Since I was young, single, and enraptured with the solitude of winter, I decided to settle here.

And winter still seems the most vibrant season to me, for it holds the sleeping breath of new life. The earth drinks in moisture, and buds form unnoticed under their blankets of snow.

FEBRUARY 27 I trekked to Rainbow Falls via the Stehekin River today and stopped at the schoolhouse to apply new wax to my skis. I was greeted with snowballs! Lynne Baarson, the teacher, had just let the kids out to see a bald eagle soaring overhead.

How typical of our village! Stehekin has one of the last one-room log schoolhouses in the country -a 50-year-old structure heated by a wood stove. But what it lacks in concrete and glass modernity is more than made

up for by the awareness of nature and the outdoors it brings to our handful of students.

This year Lynne has eight pupils in grades one through eight. To go on to high school, they will have to take correspondence courses or board downlake at Chelan.

Soon after I arrived, Lynne set some of the children to molding snow into a polar bear, a project combining nature study, sculpture, and physical education. Unfortunately, the bear's nose kept getting knocked off.

The year's new teacher, Cragg Courtney, is the family's second. Those who had been tempted to bike or sled but squealed out around the side of the school to find a few snowballs to throw down the school steps.

After Lynne had gone inside, I strapped on my skis. As I left, Karin, Lynne's 10-year-old daughter, was on a math problem.
